

# Developer portfolio website

## 1. Introduction

- The website will be a portfolio where I can display my background and a place where all my projects and contributions can be easily displayed and accessed. The goals of the site are:
  - To include my academic background
  - To include my professional background
  - To display a list of my publications
  - To display a list of my code contributions
  - To display a list of the projects I have done or that I have currently developing as a hobby.
- The values / benefits (tangible and intangible) this application can bring are:
  - Increase my visibility to prospective future employers
  - To allow other people with same interest than me to take inspiration from my projects or to collaborate.

## 2. Expected List of Features

- Brief list of features:
  - Static pages (landing, about me, projects, contact form)
  - Dynamic pages (blog)
  - Tags for content
- Brief justifications for including these features: In order to successfully display the content, it will be required to divide it into pages that needs to be always accessible (about me, projects, contact form) and pages that will follow certain topic and will present information that will complement with time (blog). In addition to it, being able to classify the content using tags will allow to better access to related content and to group publications by areas of interest.

## 3. Market Survey

- There is a large amount of pages with the similar concept. Some examples are:
  - <https://www.r4ms3s.cz/>
  - <http://www.rleonardi.com/>
  - <http://findmatthew.com/>
  - <https://www.wokine.com/>
- Briefly compare the features of these applications with your application idea: Although the design is completely different among them, the concept is the same: to be able to showcase the skills of the developer and to facilitate engaging with the visitors.
